

Water Filtration Systems

Water is the essence of life. Unfortunately, our water supplies are today threatened by impurities, causing universal concern over the quality of drinking water.

One way of assuring yourself of great-tasting and bacteriologically safe drinking water is the Neotec Water Filtration System. The system delivers clean, safe & great tasting water.

2nd Stage

The 2nd stage is a Carbon Block Filter, which removes most of the free chlorine & some toxic organics such as Trihalomethanes (THMs) which are known to cause diseases like cancer. The Carbon filter is tested and certified by NSF international under ANSI/NSF standard 42.

This stage also removes foul smell and improves the water taste.

The Multi-Stage Filtration Process

1st Stage

The Neotec system purifies the water in 3 separate stages. The 1st stage removes sediment, dirt, rust and visible particles from the water down to a level of 5 microns (1 micron = 1/1000 of a mm). After this stage, the water becomes sparkling clear, free from any visible or suspended impurities.

3rd Stage

The 3rd stage and final stage of the system is an ultraviolet sterilizer that inactivates bacteria & virus, making it safe for drinking.

The Neotec Convenience

The Neotec Filtration System can be installed under the sink with a dedicated faucet or attached to an online water cooler to deliver pure, safe and great tasting water.

Drinking Water Systems

Model: N-SC-UV

5, micron, 10 inch sediment filter

Carbon Block cartridge filter

6W, 1 GPM ultraviolet sterilizer

REPLACEMENT PARTS

PART NUMBER	DESCRIPTION	C/O FREQUENCY
N-SF-10-05-SP	Sediment Filter, 10" nominal long, 2½ dia, All Polypropylene, Double Open End, Melt Blown construction	6 - 12 Months
N-CF-10-05-CB	Granular Activated Carbon Block Filter, 10" nominal long, 2½ dia, Double Open End, NSF tested for material requirements	6 - 12 Months
N-UVL-1-SD	Ultraviolet Lamp.6 Watts, 253.7 nm wavelength, 1.7W output, 17.7 mW/cm sq.	10 - 12 Months
